

Hannam Fertility Centre				
August 2007 to July 2008 n= 110				
Type of Cycle	Age of Woman			
Fresh Embryos from Own Eggs	<35	35-37	38-40	41-42
Percentage of transfers resulting in Pregnancy (+FHR)**	68.6%	56.7%	44.3%	31.2%
Of pregnancies, % that are twins (triplets)	29 (14)	25 (13)	12 (12)	0 (0)
All Ages Combined				
Donor Eggs	83.3%			
Own Egg	54.5%			

** Presence of fetal cardiac activity on ultrasound exam, indicating a clinical pregnancy of 7weeks gestation. Approximately 95% of clinical pregnancies will go on to live birth. Final data including live birth rates will be reported to the [Canadian Fertility and Andrology Society](#)

The HFC Aug 2007-08 statistics as stated above are current as of September 01 2008. They are based on information available to HFC at the time of posting. This data may change as additional information becomes available from patients.

Canadian average success rates may be found at <http://cfas.cfwebtools.com/>, and USA rate at <http://www.cdc.gov/ART/>. However a statistical comparison of clinic success rates may not be meaningful because patient medical characteristics and treatment approaches may vary from clinic to clinic.
